

Installation Guide

Clone the repository from github and change directory to projectmanagement

```
$ git clone https://github.com/Felix45/projectmanagement.git  
$ cd projectmanagement
```

Install all the application dependencies

```
$ composer install  
$ npm install  
$ npm run dev
```

Setup a MYSQL database on your computer

Rename the .env.example to .env file and change the following environment variables

```
DB_DATABASE = dbname  
DB_USERNAME = dbuser  
DB_PASSWORD = dbpassword
```

Create all database tables and dummy data

```
$ php artisan migrate:refresh --seed
```

Start the laravel application

```
$ php artisan serve
```

Open a browser and visit the following URL

```
$ http://127.0.0.1:8000/
```

Registered Application Users

```
['email' => 'fokinyo@yahoo.com',  
'password' => 'password']
```

```
['email' => 'emmyatkins@yahoo.com',  
'password' => 'password']
```

```
[  
  'email' => 'atah@gmail.com',  
  'password' => 'password',  
]
```

```
[  
  'email' => 'kouma@gmail.com',  
  'password' => 'password',  
]
```
